

Homework 4

CMPT 456 Software Engineering

Due: Saturday, November 30

Fall 2024

Implementation and Testing Phases (100 Points)

1. Implement two different functions from your project and test these functions using any automated test unit, upload the source code of the two functions, the source code of the automated test, **AND** a screen shot of the automated test execution. **(60 Points)**
2. Each team will have to create one account for GitHub, it must have one repository. Add me (aabumallouh01@manhattan.edu) and your team member as collaborators. Upload one function from your project, make changes to this function as a new branch, apply commits, apply pull requests, and apply merge. These activities must be done by the team members meaning I need to see half of the activities done by the first member and the rest by the other member. Also, make your GitHub username matches your first name **(40 Points)**
